## DETAILED ACTION

### *Examiner's Amendment*

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Surinder Sachar on 3/12/2008.

The application has been amended as follows:

Please cancel claim 7.

### *Election/Restrictions*

Claims 1-3 and 6 are allowable. The restriction requirement between species I-V, as set forth in the Office action mailed on 1/25/2007, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 4-5, directed to non-elected species are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

***Allowable Subject Matter***

**Claims 1-6 are allowed.**

The following is an examiner's statement of reasons for allowance:

Re claims 1-5, the prior art fails to teach or fairly suggest, "A camera unit comprising: a flexible substrate including at least an electrode region and an image pickup device region formed on the same surface thereof; a driving electrode portion disposed on the electrode region and including a plurality of electrodes arranged along a predetermined direction; **an image pickup device disposed on the image pickup region on the flexible substrate; stationary unit attaching portions disposed on the flexible substrate at positions surrounding the image pickup device region; a**

stationary unit frame which is attached to the stationary unit attaching portions by engaging with engagement sites provided at the stationary unit attaching portions, and extended in the predetermined direction; and movable units which are reciprocatingly driven in the stationary unit frame in the predetermined direction by the driving electrode portion and support a lens respectively, **wherein the flexible substrate is bent along a bending portion between the electrode region and the image pickup device region**, the electrode region is engaged with an engagement site provided on a side of the stationary unit frame so as to be fixed inwardly thereof, and the image pickup device region is fixed on an end surface of the stationary unit frame toward the movable units”.

Re claim 6, the prior art fails to teach or fairly suggest, “A method of manufacturing a camera unit comprising a stationary unit and movable units which are reciprocatingly driven in the stationary unit along a predetermined direction and support a lens respectively, the stationary unit comprising a flexible substrate including at least an electrode region, on which a driving electrode portion is mounted, and an image pickup device region, **on which an image pickup device and a stationary unit frame are mounted, on the same surface thereof of the flexible substrate**, the method comprising: attaching the stationary unit frame to the image pickup device region by engaging the stationary unit frame with engagement sites disposed on the flexible substrate at positions surrounding the image pickup device region; **bending the flexible substrate along a bending portion between the electrode region and the image pickup device region**; engaging the electrode region with an engagement site

provided on a side of the stationary unit frame so as to fix the electrode region inwardly thereof; and fixing the image pickup device region on the end surface of the stationary unit frame toward the movable units”.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
